PROFESSIONAL SUMMARY

Experienced Full Stack Engineer with 8+ years of expertise in building scalable web applications and microservices. P

TECHNICAL SKILLS

Programming Languages:

- Java (Expert), JavaScript/TypeScript (Expert), Python (Proficient)
- SQL, GraphQL, HTML5, CSS3

Frameworks & Libraries:

- Spring Boot, Spring Cloud, Spring Data JPA, Spring Security
- React, Redux, Vue.js, Node.js, Express
- JUnit, Mockito, Jest, Playwright, Selenium

Databases & Storage:

- PostgreSQL, MySQL, MongoDB, Redis
- Amazon S3, Azure Blob Storage

Cloud & DevOps:

- AWS (EC2, Lambda, RDS, S3, CloudFormation)
- Azure (App Service, Functions, SQL Database)
- Docker, Kubernetes, Terraform
- Jenkins, GitLab CI/CD, GitHub Actions
- Maven, Gradle, npm, Webpack

Tools & Technologies:

- Git, JIRA, Confluence
- REST APIs, GraphQL, Microservices
- Kafka, RabbitMQ
- Elasticsearch, Logstash, Kibana (ELK Stack)

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer

TechCorp Solutions, San Francisco, CA

March 2021 - Present

- Lead development of enterprise-scale resume analysis platform serving 50K+ users
- Architected microservices-based backend using Spring Boot and PostgreSQL, achieving 99.9% uptime
- Built responsive React frontend with Redux state management and GraphQL integration
- Implemented job matching algorithm using vector embeddings and semantic search (85% accuracy)
- Reduced API response time by 60% through database query optimization and Redis caching
- Mentored team of 5 junior developers in best practices and code review processes
- Established CI/CD pipeline with automated testing, reducing deployment time from 2 hours to 15 minutes
- Technologies: Java 17, Spring Boot 3.x, React 18, PostgreSQL, Docker, Kubernetes, AWS

Full Stack Engineer

DataFlow Inc., San Francisco, CA

June 2018 - February 2021

- Developed RESTful APIs serving 100K+ daily requests for data analytics platform
- Built real-time dashboard using React and WebSocket for live data visualization
- Implemented OAuth2/JWT authentication system with role-based access control
- Designed and optimized database schema for handling 10M+ records efficiently
- Created automated test suite with 85% code coverage using JUnit and Mockito
- Migrated legacy monolith to microservices architecture, improving scalability
- Technologies: Java 11, Spring Boot 2.x, React, MongoDB, Redis, Docker, Azure

Software Engineer

StartupHub, Palo Alto, CA

July 2016 - May 2018

- Developed full-stack features for SaaS platform using Java and Angular
- Built batch processing system for handling large-scale data imports (1M+ records/hour)
- Implemented comprehensive logging and monitoring using ELK stack
- Participated in agile development process with 2-week sprints
- Collaborated with product team to define requirements and user stories
- Technologies: Java 8, Spring Framework, Angular, MySQL, Jenkins, AWS EC2

EDUCATION

Master of Science in Computer Science

Stanford University, Stanford, CA

Graduated: 2016

GPA: 3.8/4.0

Focus: Distributed Systems, Machine Learning

Bachelor of Science in Computer Engineering

University of California, Berkeley, CA

Graduated: 2014

GPA: 3.7/4.0

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (2023)
- Oracle Certified Professional: Java SE 11 Developer (2022)
- Certified Kubernetes Application Developer (CKAD) (2021)

NOTABLE PROJECTS

AI-Powered Resume Matcher

- Built machine learning system for matching candidates to job requirements
- Implemented natural language processing for skills extraction
- Achieved 85% matching accuracy using semantic similarity algorithms
- Technologies: Python, TensorFlow, BERT embeddings, PostgreSQL

Microservices E-commerce Platform

- Architected distributed system with 12 microservices handling 50K concurrent users
- Implemented event-driven architecture using Apache Kafka
- Deployed on Kubernetes with auto-scaling and load balancing
- Technologies: Spring Boot, Kafka, Docker, Kubernetes, PostgreSQL

Real-Time Collaboration Tool

- Developed WebSocket-based application for team collaboration
- Built operational transformation algorithm for conflict resolution
- Supported 1000+ concurrent users with low latency (<50ms)
- Technologies: Node.js, Socket.io, React, Redis

ACHIEVEMENTS

- Led migration project that reduced infrastructure costs by 40% through cloud optimization
- Presented "Building Scalable Microservices with Spring Boot" at JavaOne Conference 2023
- Contributed to open-source Spring Boot projects (300+ GitHub stars)
- Reduced system downtime by 75% through implementing comprehensive monitoring and alerting

LANGUAGES

- English (Native)
- Mandarin Chinese (Fluent)
- Spanish (Conversational)

INTERESTS

- Open source contribution

- Technical writing and blogging
- Mentoring aspiring developers
- Machine learning and AI
- Cloud architecture patterns
